PROFESSIONAL SUMMARY

Computer Science Engineering student passionate about AI, software development, and problem-solving, with strong analytical thinking, research curiosity, and a drive to build impactful technology solutions and an Open source contributor.

EDUCATION

Bachelor of Technology (Computer Science)

2025 - 2029

SVYASA , Newton School of Technology

Grade: 8.64/10.0

Intermediate (Class XII)

2023 - 2024

Olivia Enlightened English School

Grade: 81.6%

Matriculation (Class X)

2021 - 2022

Olivia Enlightened English School

Grade: 97.6%

INTERNSHIPS

Open Source Contributor

May 2026 - Present

Social Summer of Code

Remote

Found errors in projects and solved them by raising PRs

Open Source Contributor

May 2026 - Present

GirlScript Summer of Code

Remote

Found problems in projects, raised PRs for selected Open Source Projects and organisations.

PROJECTS

HotDog — AI Engineering Intelligence Platform ([Github](#)) ([Demo](#))

June 2026

- Developed **HotDog** , an AI-powered engineering intelligence platform that reverse-engineers software projects into structured blueprints, helping developers understand architecture, technologies, and engineering decisions rather than just the generated code.
- **Features:** Repository analysis • Workflow reconstruction • Architecture visualization • Tech stack & dependency explanation • Context-aware tool alternatives • Hidden open-source tool discovery • AI-generated engineering documentation • Personalized learning roadmap.
- **Tech Stack:** Python • Google Gemini • Google Antigravity • Anakin Universal Scraper API • Wire API • HTML • CSS • JavaScript (*add any frameworks/libraries you actually used, e.g., Flask, FastAPI, React, etc.*)

DeBae (Hackathon Winner) ([Github](#))

June 2026

- Developed a multi-agent AI debate platform enabling AI experts to discuss topics from diverse perspectives; **winner of the AMD AI Hackathon.**
- **Features:** Distinct AI personas • Moderator orchestration • Multi-turn debates • User interaction • Conversation management • AI summarization.
- **Tech Stack:** Python, FastAPI, Next.js, React, TypeScript, Tailwind CSS, Gemini API.

Teleport ([Github](#))

May 2026

- Built a free-to-use software solution to solve Android-to-macOS MTP file transfer issues, enabling smoother and more reliable cross-platform file management.
- **Features:** Share, delete, copy, move files from any operating system.
- **Tech Stack:** Rust

Agent-Deception-Lab ([Github](#))

March 2026

- Built a lightweight experimental simulation exploring how AI agents behave under reward incentives, and how deception becomes harder to detect as it becomes more strategic, Reinforcement Learning.
- **Features:** Addresses the AI safety question of what happens when an agent is incentivized to lie — showing that higher rewards lead to more strategic, harder-to-detect deception.
- **Tech Stack:** Python (core simulation logic + Matplotlib for plots), HTML/CSS for a visualization UI, and a simple rule-based statistical detector.

Prompt-Verification ([Github](#))

March 2026

- Built a research-paper style project covering AI history, LLMs, tokenization, and how they work, paired with a small web app that refines and summarizes LLM outputs based on user-provided prompts.
- Solves the problem of understanding how prompts affect LLM output quality, and gives users a way to see a cleaner, refined summary of responses.
- Tech stack: JavaScript (72%), CSS, HTML — frontend built with React/Vite + Tailwind, with a Node.js backend server.

Code Analyzer ([Github](#))

March 2026

- A static code analysis web tool where users paste Python code and get back time complexity estimates (Big-O), code structure insights, recursion detection, and optimization suggestions.
- Solves the problem of manually reviewing code efficiency — especially useful for learners who want quick feedback on loop depth, recursion, and algorithmic complexity without a compiler.
- Tech stack: Python (Flask) for the backend, Python's AST (Abstract Syntax Tree) module for parsing, and HTML/CSS/JavaScript for the frontend UI.

CERTIFICATIONS

CodeDay Hackathon Hack Club ([Link](#))

December 2025

CodeDay Bengaluru hackathon was a 12 hours

Smart India Hackathon Ministry of Education's (MoE) Innovation Cell and the All India Council for Technical Education (AICTE),
Government of India ([Link](#))

September 2025

Smart India Hackathon is a nationwide hackathon conducted by AICTE and MoE innovation cell. I participated it for the intracollege (or internal) hackathon.

SKILLS

Computer Language: CSS, JavaScript, Python, Rust

Courses: Data Structure

Soft Skill: Communication Skills, Critical Thinking, Decision-making, Presentation Skills, Problem-Solving, Public speaking, Research, Responsibility

Databases & Data Tools: Firebase

Cloud & DevOps: Docker, Git and Github

Frameworks & Libraries: Django, Framer Motion, React, Tailwind

EXTRA-CURRICULAR ACTIVITIES

- Active open-source contributor and collaborative project participant (GSSoC and SSoC).
